

UNO WHITEPAPER 9

A whitepaper on the new bridged parallel Unobtanium tokens, released on the Simple Ledger Protocol and Binance Smart Chain.

These tokens take advantage of the minimalist open source SLP chain and the large marketcap and base currency of BNB

You will be able to roll a joint with it.

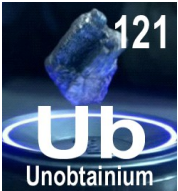

UNOBTANIUM (UNOSLP)

on the Simple Ledger Protocol (SLP)

250000 MAX

UNOBTANIUM BSC (UNOBSC)

on the Binance Smart Chain (BSC)

250000 MAX

UNOSLP and UNOBSC were created as a response to UNO256 becoming non-magical, upon merge mining with BTC256.

UNOSLP was brought out to create an Unobtanium on the cheapest, most minimal open source chain there is. It is intended to be traded on the new bch-dex.

UNOSLP was fully collateralised on xphxco.org bridge.

UNOBSC was created to take advantage of the programmable nature of the BSC chain and its largest market cap. It is easily traded on most bsc dexs and allows effective pairs and staking/rewards plans.

Between these two bridged assets it is hoped Unobtanium will last the test of time

and be a model for how UNO should be.

UNOSLP and UNOBSC intend to create an ecosystem of slp and bsc tokens to pair against. UNOBSC can be used to unlock the RSS Infolines and AI prompt Library pages on unobtanium.info

This effectively monetises my bespoke RSS Infolines and AI archive of my Prompt designs.

Available for hodl of 1 UNOBSC in your metamask browser wallet.

Top Custom Prompt products will be available to purchase and download from the unobtanium.info shop.

UNOBSC has LPs to invest and a rewards program.

UNOBSC has TVL locked until 2030, to make it easier to trade and trust.

Treasury Tokens are locked for a year at a time when an annual pre-sale of UNOBSC will take place for two weeks.

UNOBSC rewards HODL and has a LP that gets larger with every trade.

UNOBSC dev fee will be used to open new pairs, pay web fees and acquire packs of UNOBSC custom rizla rolling papers in UNO SHOP.

FEES:

Domain	15£ year
Host	95£ year
Payment Gateway	80£ one off
Dashed Slug plugin	110£ year
DEV GAS BNB/BCH	300£ year
Contract SETUPS	600£ year
Phone	420£ year
Custom Rizla	1000£ year
AI fees	300£ year

There are other computer equipment fees, but i do not include here.

UNOBTANIUM WALLETS

For UNObsc

<https://metamask.io/download/>

After download add BSC network protocol as following:

Add a new network screen; the profile circle on the top right corner->settings->networks->add a new network.

The following information needs to be entered: Network Name, New RPC URL, Chain ID, Currency Symbol, and Block Explorer URL (Optional):

Network Name: Smart Chain

New RPC URL: <https://bsc-dataseed.binance.org/>

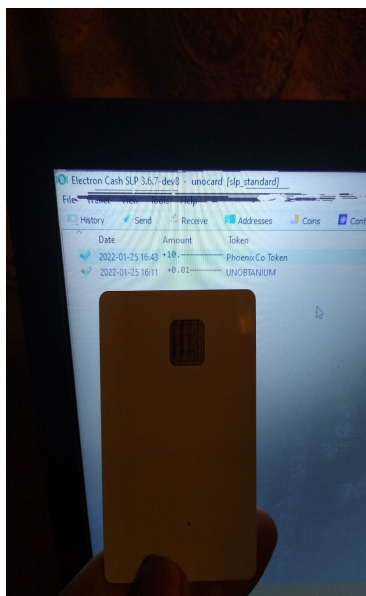

ChainID: 56

Symbol: BNB

Block Explorer URL: <https://bscscan.com>

Send some BNB to your now BSC address, which will trigger your wallet instance on the blockchain.

UNOCARD

SLP/BSC

Satochip have verified UNOSlp and are now a official UNOSlp affiliate

See unobtanium.info for more updates

<https://satochip.io/product/custom-your-hardware-wallet/wallet/57/?campaign=UNOcard>

UNO CARD

Prerequisites:

1x satochip developer card

1x satochip card reader

<https://github.com/Toporin/SatochipApplet/releases>

.....latest .cap

<https://github.com/martinpaljak/GlobalPlatformPro/releases>

latest gp.exe is needed to load .cap onto chip

use only this....

<https://github.com/simpleledger/Electron-Cash-SLP/releases/tag/3.6.7-dev8>

and this.....

<https://github.com/Toporin/electrum-satochip/releases/download/v4.1.5-0.12/electrum-satochip-v4.1.5-0.12-f75c143b-setup.exe>

Put the .cap file in the same folder as the GlobalPlatformPro file for convenience

To list the applets loaded on a smartcard: gp.exe -l

To load the Satochip applet open command line prompt:

gp.exe -install .\yourfile.cap

To delete the Satochip applet: gp.exe -uninstall .\yourfile.cap

.....now setup a new wallet with hardware device option in ELC and assign pin and your away.
